

Note Regarding Matching OME Springs

Old Man Emu has recently revised the "handed" DS / PS (driver Side /Passenger side) labeling configuration for Land Rover Coil Spring application. This change was made to prevent customers and certain vendors from wrongfully matching spring sets in order to gain a perceived advantage.

The OME engineers have stressed that the sets must be sold as supplied to maintain the warranty and avoid potential issues that are outside the intended design factors.

If you have any questions about the spring match issue please contact us at: info@offroadtuff.com

Thank you,
